

Wind power

Cable Entry Solutions

We Seal Your World

Keep your wind turbines running

With the Roxtec sealing system for cables and pipes, the wind power industry has a standardized safety solution for maximum operational reliability. Our solutions cover all your protection needs and ensure a good return on your investment.

Standardize for efficiency

A standard solution for cable sealing, fixation and vibration damping is of great value to all players in the wind power business. It simplifies design, production, logistics, roll-out and maintenance, giving you the opportunity to save time and money all along the chain.

As a wind turbine manufacturer, you avoid warranty claims. As operator or owner, you maximize uptime.

Operational reliability

Every component of the Roxtec sealing system is developed to ensure long-term operational reliability in onshore and offshore wind farms. Our solutions are tested and certified to protect your investment against water, gas, fire, electro-magnetic disturbance, dust, vibrations, and rodents.

- Solution for standardization
- Maximized uptime
- Certified safety
- Long-term protection
- Locally global

Easy installation, faster roll-out

Flexible solutions

The adaptable Roxtec cable entry solutions give you an advantage on the global market, from engineering to on-site installation. Thanks to Multidiameter™, our technology based on sealing modules with removable layers, there is no need to worry about the cable configuration or the size of the cables used locally. You are always provided with a practical and safe standard sealing solution – that makes a perfect fit.

User-friendly system

Our seals are easy to install, and you can seal several cables of different sizes in one opening. The entire installation can be completed from one side, and the large frame opening even allows you to route cables with lugs or connectors through the transit. This is how we help contractors, installers and operators to keep up the high speed.

Faster roll-out

To stay competitive, you must be able to act quickly. Standardization with one supplier of sealing solutions will reduce stock, lower handling costs and enable time-savings during commissioning of turbines. Our solutions help on-site installers to finish their job before schedule. Customers further improve their logistics by choosing our tailor-made kits.

Future capacity built-in

When time has come for maintenance or upgrades, you will not regret having chosen Roxtec. You can open up the sealed cable entry, add cables or perform last minute changes, and then re-seal the transit again. This work can be done quickly, without any spare parts, whenever the opportunity occurs.

Protection against vibration

Extended cable lifetime

Our system gives you more than an outstanding sealing solution. Thanks to the flexible modules of the system, cables of different sizes are securely sealed and fixed. The rubber in the sealing modules is softer than the outer jacket of the cables. The cables are well-protected from damage due to vibrations and the lifetime of cables and related components is extended.

Seal, fix and soften

What more can you ask for than a certified standardized solution for cable sealing, fixation and protection? With Roxtec, you protect your investment from the design phase, through manufacturing, roll-out, and operation. In fact, you protect the equipment until long after the turbine manufacturer's warranty has expired. No wonder Roxtec has become a globally preferred industry standard.

- Easy installation
- One supplier of seals – one stop shop for all solutions
- Future capacity included
- Cable-friendly fixation
- Protection of cables

Our flexible sealing system

Multidiameter™ by Roxtec

Our adaptable solution, based on modules with removable layers, makes installation easy and safe. From each seal, you can peel off layers to enable a perfect fit to different sizes of cable or pipe. You can seal traditional cables and optic fiber cables or pipes side by side.

Better space management

Thanks to the modular-based seal, cables are neatly organized in the

transit. A small, but proper distance between each cable creates area efficiency, and facilitates overview and maintenance.

Easy upgrading

The Roxtec flexibility and built-in spare capacity gives you the possibility to seal an opening and add cables later on. It facilitates maintenance and modifications. The re-powering of wind farms has suddenly become very cost-effective.

How it works

Basic steps in the assembly of a modular-based Roxtec sealing solution. (Extract from the original assembly instruction).

1 Adapt the modules to fit cables or pipes by peeling layers until you reach the gap seen in pic. 2.

2 Achieve a 0.1-1.0 mm gap between the two halves when held against the cable/pipe.

3 Lubricate all modules for the frame thoroughly, both the inside and the outside surfaces.

4 Insert the modules according to your installation plan (transit plan). Usually start with the largest modules.

5 Insert a stayplate on top of every finished row of modules.

6 Insert the Wedge and tighten the screws until full stop, approx 20 Nm (15 ft.lb.).

7 Attach the Wedge Clip to the wedge bolts to check that the wedge has been properly tightened.

Roxtec solutions for wind turbines

Transits for converter.

Transits for generator.

Transits for potential equalization, and standard system for control cabinets in the nacelle.

Bus bar transits for transformer room.

Transits between fire zones.

Transits for hub, radar, weather station and aeronautical obstruction lighting.

Retention systems below nacelle and in tower.

Openable frames for easier installation of power cables in cabinets.

Transits for cabinets and panels.

Transits for foundations.

Roxtec keeps your wind turbines running

Here are examples of applications where the Roxtec sealing system protects onshore and offshore wind power infrastructure and adds value.

Transits into foundation.

Transits for converter stations onshore, with EMC and standard products.

Transits for substations.

Transits for transformer shelters and transformer stations.

Transits between fire zones in offshore substations.

Transits for submarine cable in monopile.

Transits for submarine cable in foundation.

Transits for technical shelters and transformer stations.

Technical competences

- Fire protection
- Watertight
- Gas-tight
- Protection against rodents/pests
- EMC potential equalization

We support you globally

Sharing our knowledge

Roxtec is more than a supplier. Our staff around the world works in close co-operation with customers to find the optimal solution. Our knowledge, acquired through many years of work in the field, enables us to guide you to a solution that suits your unique needs. Whether you invest in onshore or offshore wind farms, or both, we are able to provide seals that guarantee operational reliability.

We help ensure quality

Our extensive R&D resources, with design departments, a fire test lab and a technical center, give us the opportunity to continuously develop and improve products and solutions for your specific needs. We provide tests and certificates as well as support and documentation for transferring knowledge within your organization.

Installation training

Whenever desired, we provide product installation training on site through our sales staff and technicians. In the Installer's section of our global website www.roxtec.com, we have collected useful information for staff involved in assembly and installation of the Roxtec sealing system. Instructions and videos can be viewed online or downloaded for free.

The world's most available modular seal

All our sealing solutions are available worldwide through our network of local suppliers. This means direct support and fast deliveries from local stocks – on more than 70 markets.

Among our wind power customers you find:

ABB, AREVA, BARD Engineering GmbH, Clipper Wind, Enercon GmbH, Fuhrländer, Gamesa Eolica, GE Wind Energy, MHI, M-Torres, Multibrid GmbH, REpower Systems AG, Siemens, Siemens Wind Power A/S, Suzlon Energy, The Switch, UESA, Vattenfall, Vestas Wind Systems A/S and WinWinD Oy.
